

Adjustable Rehabilitation Stairs

A useful aid for stroke rehabilitation and those recovering from leg injuries, these Adjustable Rehabilitation Corner Steps are made from strong, durable hardwood and covered in non-slip carpet. This promotes greater safety, it protects the steps and it reduces noise when the steps are in use.

On one side, there are three steps with a 200mm (8") rise and on the other there are four steps, each with a 150mm (6") rise. Both sets are accompanied by a sturdy handrail.

Length: 1430mm (56.25") Width: 1185mm (46.5")
Maximum user weight 140 kgs (22 st)

Also available in a Paediatric size, brightly coloured to brighten any clinic and aid compliance. On one side there are four steps with a depth of 115mm and on the other there are three steps with a depth of 150mm. The handrails adjust from 38cm to 75cm.
