

Therapy Benches

ADJUSTABLE, FUNCTIONAL AND COLOURFUL

Large Therapy Bench with hip and knee supports.

Active therapy

Therapy benches can play a significant part in helping children to progress from floor-based therapy to kneeling and from kneeling through to standing. Wider benches provide sufficient surface area for children to support themselves where capable.

By adding or removing supports, children can be supported as little or as much as possible, to facilitate their requirements and that of the therapists.

The addition of hip, thoracic or knee supports enables children to be positively positioned, thus allowing the therapist to concentrate on other skill development, such as hand to mouth and cross body co-ordination.

Safe and reliable

Quest 88 therapy bench fabrics, foams and adhesives have been tested in combination and conform to BS5852 Crib 5.

The covers can be easily cleaned, whilst the upholstery has been carefully designed to offer superb levels of comfort and support.

The surface fabric has a slip resistant quality making it ideal for children who use dynamic splints. Quest 88 uses child friendly lacquers for a perfect finish and high-grade plywood for strength and durability.

Colour Options: Blue, Pink, Yellow, Orange, Purple, Green & Red.

These benches are sold separately.

Knee control

Knee pads help control adduction / abduction and help push the pelvis firmly against the hip pad. Closed cuff-type knee supports are also available.

Upper body control

Hip and thoracic pads are used to centralise the pelvis / torso and can be removed as the child develops until they can maintain a central sitting position by themselves.

Bench with tilting feature

Size/ref/code	TB1	TB2
Length (cm)	68	80
Depth (cm)	28	36
