

Upi Multi Stander

COMPLETE VERTICAL STANDING SOLUTION

THErapy THROUGH ACTIVITY

Infant Multi Stander with optional head support.

Infant Multi Stander with tray tilted for play.

The Upi Multi Stander is a vertical children's stander which is available in three sizes, suitable for children from 3 to 14 years of age.

The Upi Multi Stander is unique in that it provides the therapist with two standing solutions in one - a hip stander and a fully supported vertical stander.

The Upi Multi Stander incorporates an adjustable tray and activity bowl as standard. The knee supports are adjustable in all necessary planes to enable therapists to find the optimum position with little fuss. The base castors are designed to be locked either by hand or foot.

Comfort and security

Hip and thoracic 'wraps' offer comfort and security to the child and provide a positive means of controlling and correcting posture for the therapist or parent. Once positioned, secondary straps are on hand to provide absolute security.

Available in royal blue, fuchsia pink, apple green and rustic orange. A selection of optional accessories are shown overleaf.

COMPLETE VERTICAL STANDING SOLUTION

THErapy THROUGH ACTIVITY

Upi - Large

The Upi Large is designed to accommodate older children, and has a slightly different appearance to its smaller relatives.

In particular, the Upi Large has an extendable footprint base for extra stability and to facilitate transportation between rooms.

Accessories

Optional accessories for the Upi Multi Stander include; a head support unit and a grab bar (for use with tray).

Also available are: A tray infill pad for safe play, a thoracic infill panel to stop wandering fingers (for use with tray), extra long upholstery, synthetic lambs wool knee cap liners and knee hyper-extension straps.
